SUMMARY

Final-year Computer Science undergraduate (2027) who has shipped three end-to-end systems: a CNN-based drowsiness detector at 95.6% accuracy, an AI resume-screening platform with REST APIs and a recruiter dashboard, and Pigmie — a full-stack fintech app live as both a responsive web app and a native Android build, with offline-first sync and role-based approval workflows. Comfortable across the stack, from Python backends to SQL databases to applied ML, and looking for a Software Engineering role where that range is useful.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL

Databases: MySQL, MongoDB, Oracle SQL, Firebase Firestore, IndexedDB

AI/ML/DL: TensorFlow, Scikit-learn, CNN, YOLO

Data Engineering & Processing: NumPy, Pandas, Data Validation, Data Cleaning, Data Processing

Core Subjects: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering

Tools & Platforms: Git, GitHub, FastAPI, Firebase Authentication, Jupyter Notebook, Google Colab

PROJECTS

Pigmie — Financial Record & Collection Management Platform

- Built a full-stack loan and micro-finance collection tracking platform, shipped as both a responsive web app and a native Android app via Capacitor.
- Architected a dual-mode synchronization system using IndexedDB for offline-first zero-latency performance and Firebase Firestore for real-time multi-user data consistency in a fintech environment.
- Designed role-based access control (Admin, Manager, Agent, Auditor) with an approval workflow, so restricted roles submit change requests for admin review before they reach the live database.
- Built an analytics dashboard tracking total capital, collections, pending dues, and top defaulters using Firebase Authentication and Firestore.

AI-Driven Driver Drowsiness Detection System

- Developed a CNN-based real-time drowsiness detection system using TensorFlow and OpenCV.
- Achieved **95.6% accuracy** in detecting driver drowsiness under varying environmental conditions.
- Integrated an alert mechanism for immediate driver notification and enhanced road safety.
- Tuned hyperparameters and iterated across evaluation cycles to reduce false negatives and improve detection consistency.

AI Resume Screening and Candidate Ranking System

- Built an AI-powered resume screening system that uses semantic skill matching to generate explainable candidate rankings.
- Built REST APIs and a recruiter dashboard for resume upload, candidate comparison, and shortlist generation.
- Automated extraction of skills, experience, and profile information from PDF, DOCX, and TXT resumes.

EDUCATION

Bachelor of Engineering (CSE) — Cambridge Institute of Technology — 7.0 CGPA (till 6th sem, final CGPA pending) — 2027

Pre-University College — Sri Vidyaniketan PU College — 87.33% — 2023

Higher Secondary Education — Christ The King School — 87.68% — 2021

No active backlogs.

LEADERSHIP & ACTIVITIES

- Led event operations for multiple CSI Student Chapter events — managing logistics, volunteers, and participant engagement — while coordinating with faculty coordinators to deliver each on schedule.

CERTIFICATIONS

- Oracle: Generative AI
- Academic Certificates : Machine Learning, Deep Learning, NPTEL(DAA)
- Infosys: Python, Java, Web Development
